Vitronite vs Marble

Crack Proof

Unlike Marble, Vitronite is a matrix of sintered minerals to form an impenetrable surface that cannot be easily cracked.

Shows Visible Cracks

Marble is a natural stone made of metamorphic carbonate that has more pores and can be easily cracked.

Low Maintenance

Vitronite is easy to clean and maintain in comparison with other natural stones that require careful consideration.

Requires High Maintenance

Marble and other natural stone require high maintenance to retain their shine and sheen or they become yellow and dull over time.

Value for money

Due to its techno-rich process, Vitronite proves to be the best choice in the long run.

Highly Expensive

Marble is inherently expensive and has high maintenance, upkeep, and transport cost.
